

Data Engineer with 4+ years of hands-on experience designing scalable data pipelines, automation workflows, and AI-driven solutions using Python, SQL, PySpark, Apache Spark, and Databricks. Expertise in ETL/ELT framework development, data migration, data warehousing (Delta Lake), data modeling, and data governance across enterprise environments. Experienced in distributed stream processing with Apache Kafka and Spark Streaming alongside large-scale batch processing, applying automation and LLM integration to eliminate manual effort and improve operational efficiency. Strong software engineering foundation spanning CI/CD pipelines, Git version control, and test-driven development.

TECHNICAL SKILLS

Languages	Python, PySpark, SQL, Shell Scripting (Bash)
Big Data & Streaming	Apache Spark, Spark Streaming, Apache Kafka
Cloud	Microsoft Azure (ADLS Gen2,Blob Storage, Azure Data Factory,AWS S3)
Data Engineering	ETL/ELT Pipelines, Delta Lake, Data Modeling, Data Warehousing, Data Quality & Governance
DevOps	Git, CI/CD Pipelines, Unit & Integration Testing, Agile/Scrum
Visualization & BI	Power BI
ML & Analytics	Scikit-Learn, TensorFlow, Random Forest, NLP, Prophet, ARIMA, Time Series Forecasting

PROFESSIONAL EXPERIENCE

Data Engineer / Associate <i>Cognizant Technology Solutions</i>	Feb 2022 — Present <i>Gurugram, India</i>
---	---

- Architected and optimized 15+ production ETL/ELT data pipelines using Python, PySpark, Spark SQL, and Databricks, processing 10M+ customer records across multiple business units with 99.5% data delivery accuracy and robust error handling.
- Built end-to-end cloud data migration workflows integrating ARIBA, ServiceNow,SAP and CRM source systems; leveraged Apache Kafka for real-time event streaming and Spark Streaming for stream-processing workloads, loading curated data into Delta Lake and Hive-based warehousing layers.
- Designed and enforced data governance and data quality frameworks with automated auditing checks, data lineage tracking, and access-control policies, ensuring regulatory compliance and data integrity across all pipeline outputs.
- Developed data models and schema designs for Delta Lake and Hive tables, optimizing storage strategies (partitioning, Z-ordering, compaction) to improve query performance by 45% on downstream analytical workloads.
- Implemented CI/CD pipelines using Git for automated testing, code-quality enforcement, and zero-downtime deployment of pipeline releases, reducing release cycle time by 40%.
- Wrote complex SQL queries and Databricks SQL notebooks for large-scale operations on Delta Lake, applying query optimization, partitioning, and performance tuning that reduced average query execution time by 35%.
- Built production-grade data quality and auditing dashboards using Python and Power BI, providing real-time SLA and data-integrity visibility for senior stakeholders across 4 business units.
- Designed and deployed a ServiceNow-integrated ticketing chatbot using Python and NLP, automating 70% of routine ticket queries and increasing team operational efficiency by 35%.
- Built an automated weekly reporting pipeline using PySpark and Spark SQL on Databricks, with dashboards hosted in Power BI, replacing a manual process that took 3–5 hours per person each week.
- Reclaimed 3–5 hours of analyst time weekly by fully automating report generation, enabling the team to focus on higher-priority data engineering work.

Artificial Intelligence Researcher <i>Eurekai Co. (Portugal-based Fintech Startup)</i>	Nov 2021 — Jan 2022 <i>Remote</i>
--	---

- Led data pipeline development and ML research to optimize Forex trading strategy execution, building predictive models in Python that achieved a 20% increase in forecast accuracy and boosted trading returns within 6 months.
- Engineered data ingestion and transformation workflows on Dukascopy historical Forex datasets, applying statistical validation and classification models (Random Forest, ensemble methods) that improved trade-signal precision.
- Collaborated with a cross-functional research team, proactively communicating findings and aligning algorithmic strategies with business objectives through iterative development cycles.

PROJECTS

Inventory Management & Demand Forecasting System <i>Personal Project</i>	Sep 2023 — Nov 2023 <i>Python, Pandas, NumPy, Prophet, ARIMA</i>
--	--

- Designed a data-driven inventory management pipeline using Python, Pandas, and NumPy with structured data modeling, identifying optimal safety-stock levels and reorder points that reduced stockouts by 30%.
- Built and benchmarked ETL workflows feeding multiple forecasting models (Prophet, ARIMA) for SKU-level demand prediction, using MAPE-based evaluation to achieve a 20% improvement in forecasting accuracy.

- Developed visualization layers with Matplotlib and Seaborn to surface seasonal demand patterns, translating insights into inventory-optimization strategies that reduced excess inventory costs.

EDUCATION

Bachelor of Technology — Computer Science, *Graphic Era University, Dehradun, India* May 2018 — Jun 2022
CGPA: 8.34 / 10 | *Relevant Coursework:* Data Structures & Algorithms, Database Management Systems, Software Engineering, Statistics & Probability

ACHIEVEMENTS

- Recognized as “Most Consistent Performer” at Cognizant for sustained excellence in delivering production-grade data engineering solutions, maintaining 99.5% SLA compliance and zero critical pipeline failures across quarterly review cycles.
