Summary

Data Engineer with 4+ years building scalable data pipelines, cloud data platforms, and AI-driven data solutions using Python, PySpark, SQL, and Azure Databricks. Experienced in production ETL/ELT, data modeling, and distributed processing across Azure and AWS, with hands-on GenAI work using RAG, LLMs, embeddings, and vector search alongside predictive modeling and forecasting. Delivered enterprise-scale migrations, processed 10M+ records at 99.5% accuracy, and improved pipeline performance by 45%.

Experience

Cognizant Technology Solutions Feb 2022 – Present
Data Engineer / Associate *Pune, India*

- Built and managed 15+ scalable data pipelines and workflows on Azure Databricks using Apache Spark (PySpark, Spark SQL), processing 10M+ records at 99.5% delivery accuracy.
- Migrated legacy AWS Glue ETL workloads to Azure Databricks as the primary developer, delivering 95 Delta tables and 9 production pipelines across the full development lifecycle.
- Developed ETL and data integration workflows across 16+ source systems (ARIBA, ServiceNow, CRM, and others), loading curated data into Delta Lake and warehouse layers.
- Managed data storage and warehousing on ADLS Gen2, Delta Lake, and Synapse, designing data models and tuning queries to improve performance by 45%, with data governance and quality frameworks (auditing, lineage, access controls).
- Automated weekly summary reporting for 5–6 business units by ingesting ServiceNow data with PySpark on Databricks and building a dashboard on top, eliminating a manual 3–5 hour task.

Eurekai Co. (Fintech Startup) Nov 2021 – Jan 2022
Artificial Intelligence Researcher *Remote*

- Built Python machine-learning models (Random Forest, ensemble methods) to predict Forex price movements, engineering technical-indicator features from historical price data.
- Validated models with time-series cross-validation and tuned hyperparameters, improving forecast accuracy by 20% within 6 months, and engineered the ingestion and transformation workflows feeding the models.

Projects

ServiceNow AI Resolution Assistant (RAG) | *Python, OpenAI Embeddings, Vector Search, RAG, LLM*

- Designed an end-to-end RAG-based AI assistant that retrieves relevant historical ServiceNow tickets and generates contextual resolution recommendations for incoming support requests.
- Implemented document ingestion, preprocessing, embedding generation, vector indexing, and semantic retrieval to transform historical tickets into a searchable knowledge base.
- Integrated an LLM with the retrieved context to generate grounded responses, reducing repetitive manual triage and automating roughly 70% of routine ticket queries.

Inventory Management & Demand Forecasting | *Python, REST APIs, Pandas, NumPy, Prophet, ARIMA* 2023

- Built an ETL pipeline in Python that ingested sales and inventory data from SAP via REST API, then cleaned, transformed, and engineered demand features (seasonality, trend, and reorder signals) for SKU-level forecasting.
- Benchmarked Prophet and ARIMA with MAPE-based evaluation to select optimal forecasts, improving accuracy by 20% and identifying safety-stock and reorder points that reduced stockouts by 30%, with Matplotlib/Seaborn visualizations of seasonal demand patterns.

Technical Skills

Programming: Python, SQL, PySpark, Spark SQL, C++

Data Engineering: ETL/ELT, Apache Spark, Databricks, Delta Lake, Airflow, Kafka, Data Modeling

AI/ML: Machine Learning, Random Forest, Ensemble Models, Forecasting (Prophet, ARIMA), Feature Engineering

GenAI: LLMs, RAG, Embeddings, Vector Search, Prompt Engineering, OpenAI APIs

Data Platforms: Delta Lake, Snowflake, Synapse, Redshift

Cloud: Azure (Databricks, ADF, Synapse, ADLS Gen2, Azure SQL); AWS (S3, Glue, EMR, Redshift, Lambda, Athena)

Tools & CI/CD: Git, Bitbucket, Jenkins, CI/CD, DBeaver, PyCharm

Education

Graphic Era University 2018 – 2022
B.Tech, Computer Science and Engineering | *CGPA: 8.34/10* *Dehradun, India*
